

A photograph of a family of three sitting on the concrete steps of a brick house. The mother, on the left, is wearing a yellow and grey striped sweater and blue jeans. The father, on the right, is wearing a pink button-down shirt and blue jeans. A young child is sitting between them, wearing a grey shirt and blue jeans, holding a small yellow toy car. The house has a red brick exterior and a white door with a transom window. A large white circle with a yellow dashed line is positioned above the text.

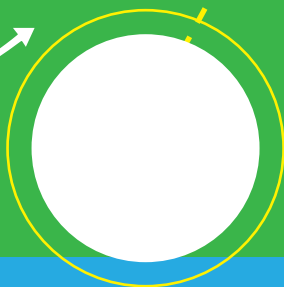

PROTECT AGAINST RADON

**RADON INDUCED LUNG
CANCER CAN BE PREVENTED**

JANUARY IS
NATIONAL
RADON
ACTION MONTH

aarst.org/nram

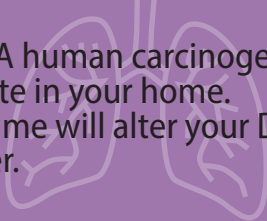

PROTECT YOUR FAMILY FROM DEADLY RADON.

1

KNOW THE FACTS. RADON CAUSES CANCER.

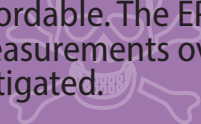

Radon is a class-A human carcinogen. High levels can accumulate in your home. Breathing in radon over time will alter your DNA and can cause lung cancer.

2

TEST YOUR HOME FOR RADON.

Radon is colorless, tasteless and odorless. The only way to know if your home has radon is to test. Luckily, testing is both easy and affordable. The EPA recommends that measurements over 4.0 pCi/L should be mitigated.

3

TELL OTHERS ABOUT THE DANGERS OF RADON GAS.

Radon is a naturally occurring radioactive gas found under the ground throughout the world. **1 in 15 homes in the US has radon.** Mitigation effectively reduces radon levels in your home and protects your family. Discuss radon with your friends and neighbors and encourage them to test their homes.
